

Brainstorming & Idea Prioritization

Date	15 September 2026
Team ID	SWTID-2026-3342
Project Name	AI BlogNest API
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member listed ideas independently during the kickoff session on 15 September 2026, before grouping and rating them.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Sivaraj S	A centralized blogging platform where authenticated Authors, Editors and Admins share one secure backend instead of scattered documents and manual publishing steps	Backend / Security	1
2	Sivaraj S	Role-based access control (Admin / Editor / Author / Reader) so each user only sees the actions relevant to their responsibilities	Backend / Security	1
3	Veron Joseph Dcouto	Blog CRUD with categories and tags so posts stay organized and easy to filter as the blog grows	Content Management	1
4	Navin P	Comment system with moderation so Readers can engage while Admins/Editors keep discussions clean	Content Management	1
5	Alfred Vishal A	Use Google Gemini to auto-generate a full blog post from just a topic or a few keywords	Generative AI	1
6	Alfred Vishal A	AI-powered summarization so readers can get the gist of a long post in seconds	Generative AI	1
7	Navin P	A social "reactions/likes" layer and richer post metadata (slug, excerpt, cover image) for a future content-discovery upgrade	Content Management	2

Step 2: Idea Prioritization

Group No.	Final Idea	Feasibility	Importance	Priority	Selected (Yes/No)
1	AI BlogNest – a centralized, role-based blogging backend that combines traditional blog/comment management with Generative AI (blog generation & summarization) via Google Gemini	High	High	High	Yes
2	Extended content model with categories collection, slugs, excerpts, cover images and a likes/reactions layer	Medium	Medium	Medium	No – deferred to future roadmap (see Scalability & Future Plan)

Group 1 was selected as the team's final idea for the 15–29 September 2026 build cycle because it directly combined the team's strongest skills (Node.js/Express backend, MongoDB/Mongoose, and Generative AI integration) with a clear, demonstrable content-management problem.
