Empathy Map

Persona: **Priya** – Content Creator / Author using AI BlogNest.

SAYS "I spend more time staring at a blank page than actually publishing." "I just want readers to get the point without reading 1,500 words." "I can't keep reviewing every comment and draft alone anymore."	THINKS "There has to be a smarter way to turn a topic into a first draft." "I wish the platform understood who should approve what." "My categories and tags are getting messy as the blog grows."
PERSONA — Priya · Content Creator / Author	
DOES - Writes and edits every blog post manually from scratch. - Re-reads long posts herself to write a shorter summary for readers. - Manually tracks who reviewed a draft and who moderated which comment.	FEELS - Time-pressured by the writing and editing workload. - Overwhelmed by managing categories, tags, drafts and comments alone. - Relieved and confident when AI handles the first draft or the summary.

This empathy map directly informed the AI BlogNest feature set: role-based CRUD blog/comment management (addresses SAYS/DOES) and Gemini-generated blog drafts and summaries (addresses THINKS/FEELS).
