Team ID	SWTID-2026-3342
Project Name	AI BlogNest API
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented code and overall AI BlogNest solution, submitted at the end of Sprint-2 (27 September 2026).

Solution Summary

Repository Link / URL	https://github.com/sivara0827/TNskills_Albloghost
Programming Language(s)	JavaScript (Node.js)
Framework(s) Used	Express.js, Mongoose
Key Features Implemented	JWT authentication (register/login), role-based access (Admin/Editor/Author/Reader), blog CRUD with drafts/categories/tags, comment management with moderation, AI blog generation & AI summarization (Google Gemini), centralized error handling
Pending / Incomplete Features	Dedicated frontend client UI (the Client/ folder is scaffolded but building it is out of scope for this cycle); a categories collection and likes/reactions layer planned as a future enhancement (see Scalability & Future Plan)
Setup / Run Instructions	<pre>cd Server npm install # create .env with PORT, MONGO_URI, GEMINI_API_KEY npm start # or: npm run dev (nodemon) # test endpoints via Postman / Thunder Client using the shared collection</pre>

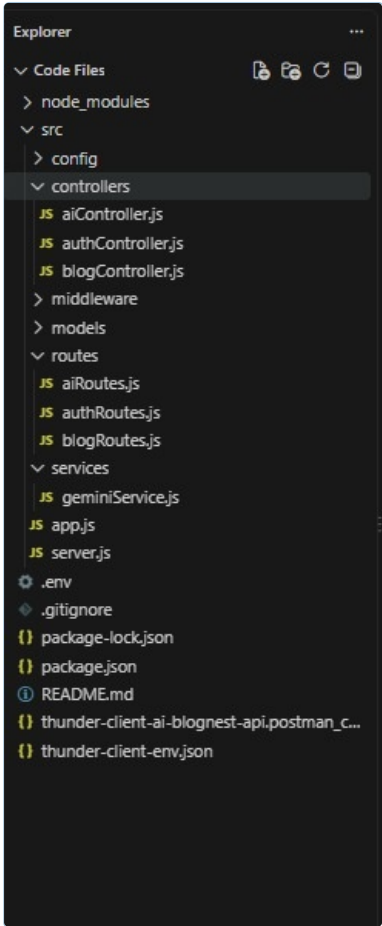

Fig. - Actual Server/ project folder structure (VS Code Explorer).

Code Quality Checklist

S.No	Criteria	Status (Yes/No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments: Auth, blog and comment endpoints were verified via Postman during Sprint-2 (22-27 September 2026) - e.g. POST /api/auth/register

returned 201 Created in 264 ms, `POST /api/blogs` returned 201 Created in 88 ms, and `GET /api/blogs` returned 200 OK in 98 ms with populated author details. The AI endpoints were noticeably slower due to external Gemini latency: `POST /api/ai/generate-blog` took 38.49 s to return a full structured post for the topic "The importance of artificial intelligence in education", and `POST /api/ai/summarize` took 5.24 s to condense that content into a 3-sentence summary. See Performance Testing for the full results table and Project Documentation for the request/response evidence.
